

AI Resume Analysis Report

Extracted Skills

python, pandas, numpy, machine learning, deep learning, artificial intelligence, tensorflow, pytorch, fastapi, docker, statistics

Job Role Analysis

AI Engineer

Match Percentage: 100.0%

Matched Skills: python, artificial intelligence, machine learning, deep learning, tensorflow, pytorch

Missing Skills: None

Learning Roadmap:

You already have all the required skills for this role.

NLP Engineer

Match Percentage: 66.67%

Matched Skills: python, machine learning, deep learning, pytorch

Missing Skills: nlp, natural language processing

Learning Roadmap:

Step 1: nlp

Learn Natural Language Processing fundamentals including text preprocessing and text representation.

Step 2: natural language processing

Study NLP techniques such as tokenization, stemming, embeddings, and text classification.

Computer Vision Engineer

Match Percentage: 66.67%

Matched Skills: python, machine learning, deep learning, tensorflow

Missing Skills: computer vision, opencv

Learning Roadmap:

Step 1: computer vision

Learn the fundamentals and practical applications of computer vision.

Step 2: opencv

Learn image processing and computer vision using OpenCV.

Machine Learning Engineer

Match Percentage: 62.5%

Matched Skills: python, machine learning, pandas, numpy, statistics

Missing Skills: scikit-learn, data structures, algorithms

Learning Roadmap:

Step 1: scikit-learn

Practice building machine learning models using Scikit-learn.

Step 2: data structures

Learn arrays, linked lists, stacks, queues, trees, graphs, and hash tables.

Step 3: algorithms

Learn searching, sorting, recursion, dynamic programming, and algorithm problem solving.

Data Analyst

Match Percentage: 44.44%

Matched Skills: python, pandas, numpy, statistics

Missing Skills: sql, excel, power bi, data analysis, data visualization

Learning Roadmap:

Step 1: sql

Learn SQL queries, filtering, joins, aggregation, subqueries, and database operations.

Step 2: excel

Improve spreadsheet analysis, formulas, pivot tables, and data visualization skills.

Step 3: power bi

Learn data visualization, dashboard creation, DAX, and reporting using Power BI.

Step 4: data analysis

Learn the fundamentals and practical applications of data analysis.

Step 5: data visualization

Learn the fundamentals and practical applications of data visualization.
