

AI Resume Analysis Report

Extracted Skills

python, sql, pandas, numpy, excel, power bi, tableau, data analysis, data visualization, statistics

Job Role Analysis

Data Analyst

Match Percentage: 100.0%

Matched Skills: python, sql, pandas, numpy, excel, power bi, data analysis, data visualization, statistics

Missing Skills: None

Learning Roadmap:

You already have all the required skills for this role.

Machine Learning Engineer

Match Percentage: 50.0%

Matched Skills: python, pandas, numpy, statistics

Missing Skills: machine learning, scikit-learn, data structures, algorithms

Learning Roadmap:

Step 1: machine learning

Learn supervised and unsupervised learning, model training, evaluation, and feature engineering.

Step 2: scikit-learn

Practice building machine learning models using Scikit-learn.

Step 3: data structures

Learn arrays, linked lists, stacks, queues, trees, graphs, and hash tables.

Step 4: algorithms

Learn searching, sorting, recursion, dynamic programming, and algorithm problem solving.

AI Engineer

Match Percentage: 16.67%

Matched Skills: python

Missing Skills: artificial intelligence, machine learning, deep learning, tensorflow, pytorch

Learning Roadmap:

Step 1: artificial intelligence

Learn the fundamentals and practical applications of artificial intelligence.

Step 2: machine learning

Learn supervised and unsupervised learning, model training, evaluation, and feature engineering.

Step 3: deep learning

Learn neural networks, backpropagation, optimization, and deep learning fundamentals.

Step 4: tensorflow

Learn how to build, train, and deploy deep learning models using TensorFlow.

Step 5: pytorch

Learn PyTorch tensors, neural networks, training loops, and deep learning model development.

NLP Engineer

Match Percentage: 16.67%

Matched Skills: python

Missing Skills: nlp, natural language processing, machine learning, deep learning, pytorch

Learning Roadmap:**Step 1: nlp**

Learn Natural Language Processing fundamentals including text preprocessing and text representation.

Step 2: natural language processing

Study NLP techniques such as tokenization, stemming, embeddings, and text classification.

Step 3: machine learning

Learn supervised and unsupervised learning, model training, evaluation, and feature engineering.

Step 4: deep learning

Learn neural networks, backpropagation, optimization, and deep learning fundamentals.

Step 5: pytorch

Learn PyTorch tensors, neural networks, training loops, and deep learning model development.

Computer Vision Engineer

Match Percentage: 16.67%

Matched Skills: python

Missing Skills: computer vision, opencv, machine learning, deep learning, tensorflow

Learning Roadmap:**Step 1: computer vision**

Learn the fundamentals and practical applications of computer vision.

Step 2: opencv

Learn image processing and computer vision using OpenCV.

Step 3: machine learning

Learn supervised and unsupervised learning, model training, evaluation, and feature engineering.

Step 4: deep learning

Learn neural networks, backpropagation, optimization, and deep learning fundamentals.

Step 5: tensorflow

Learn how to build, train, and deploy deep learning models using TensorFlow.

This report is generated for educational and career guidance purposes.
