

AI Resume Analysis Report

Extracted Skills

python, sql, pandas, numpy, machine learning, artificial intelligence, git, github, statistics, data structures, algorithms

Job Role Analysis

Machine Learning Engineer

Match Percentage: 87.5%

Matched Skills: python, machine learning, pandas, numpy, statistics, data structures, algorithms

Missing Skills: scikit-learn

Learning Roadmap:

Step 1: scikit-learn

Practice building machine learning models using Scikit-learn.

Data Analyst

Match Percentage: 55.56%

Matched Skills: python, sql, pandas, numpy, statistics

Missing Skills: excel, power bi, data analysis, data visualization

Learning Roadmap:

Step 1: excel

Improve spreadsheet analysis, formulas, pivot tables, and data visualization skills.

Step 2: power bi

Learn data visualization, dashboard creation, DAX, and reporting using Power BI.

Step 3: data analysis

Learn the fundamentals and practical applications of data analysis.

Step 4: data visualization

Learn the fundamentals and practical applications of data visualization.

AI Engineer

Match Percentage: 50.0%

Matched Skills: python, artificial intelligence, machine learning

Missing Skills: deep learning, tensorflow, pytorch

Learning Roadmap:

Step 1: deep learning

Learn neural networks, backpropagation, optimization, and deep learning fundamentals.

Step 2: tensorflow

Learn how to build, train, and deploy deep learning models using TensorFlow.

Step 3: pytorch

Learn PyTorch tensors, neural networks, training loops, and deep learning model development.

NLP Engineer

Match Percentage: 33.33%

Matched Skills: python, machine learning

Missing Skills: nlp, natural language processing, deep learning, pytorch

Learning Roadmap:

Step 1: nlp

Learn Natural Language Processing fundamentals including text preprocessing and text representation.

Step 2: natural language processing

Study NLP techniques such as tokenization, stemming, embeddings, and text classification.

Step 3: deep learning

Learn neural networks, backpropagation, optimization, and deep learning fundamentals.

Step 4: pytorch

Learn PyTorch tensors, neural networks, training loops, and deep learning model development.

Computer Vision Engineer

Match Percentage: 33.33%

Matched Skills: python, machine learning

Missing Skills: computer vision, opencv, deep learning, tensorflow

Learning Roadmap:

Step 1: computer vision

Learn the fundamentals and practical applications of computer vision.

Step 2: opencv

Learn image processing and computer vision using OpenCV.

Step 3: deep learning

Learn neural networks, backpropagation, optimization, and deep learning fundamentals.

Step 4: tensorflow

Learn how to build, train, and deploy deep learning models using TensorFlow.

This report is generated for educational and career guidance purposes.
